# Timbre

1. Introduction

- The goal for this project is to create a responsive, modern and aesthetically pleasing social media website for sharing music that users are currently listening to via posts and interacting with other users' posts.

2. User Interface Design and Prototype

- Refer to images on Page 2
- Cards providing user created information that can be continuously scrolled down on. Refreshes as new posts are added to the website.
- User interaction with cards by commenting and liking posts.
- Navbar that allows users to see their own profile, revisit their liked posts and quickly logout of their account.
- Account creation and customization (username, name, location, age, profile photo etc.)
- Search bar with filtering options so a user can specifically pick what exactly they are looking for. Either a user on the platform or an album they want to find.
